AI CODING AGENT FOR AZURE DEVOPS

MEET ARNOLD.
THE NEWEST MEMBER OF YOUR TEAM.

Your backlog, with more hands.

Arnold is a coding agent that works in your Azure DevOps board, like any other teammate. It picks up routine backlog items, assigns them to itself, builds the change and hands it to a developer or tester for approval. **Your team gets more done. Nothing is merged without a human decision.**

~1 in 5
of the first team's closed work items are handled by Arnold today

2 in 5
is the next target: doubling Arnold's share in the same team

100%
of changes approved by a developer or tester

new tools for your team to learn

HOW IT WORKS

01
Picks up
Arnold selects an item from your backlog and assigns it to itself, like any teammate.

02
Builds
It develops the change and deploys it to a test environment.

03
Gets checked
It opens a PR that runs through your normal pipeline: code quality, static analysis, test coverage.

04
You decide
A developer or tester reviews and approves. Nothing is merged without a human decision.

WHAT YOUR TEAM GETS

More throughput
Routine items get done in parallel with your planned work.

Testers fix, not just find
Find a bug, hand it to Arnold, verify the fix in a test environment.

Nothing new to adopt
Arnold lives in your existing board and pipeline. No new tool, no new process.

Developers on the hard problems
Design, complex problems and review instead of repetitive tasks.

Humans stay in control
Every change needs approval from a developer or tester.

Same quality bar
Arnold's code passes the same checks as everyone else's.

WHERE ARNOLD FITS

Bugs found in testing. The tester finds it, Arnold fixes it, the tester verifies it.

Small items and tech debt that never make it to the top of the list.

Routine maintenance and well-defined, simpler tasks.

COMMON QUESTIONS

Is the code good enough?
Arnold's changes go through the same pipeline and review gates as your developers' work. If it doesn't pass, it doesn't merge.

Won't reviewing it slow us down?
Every change is reviewed by an agent before it reaches your team, so people spend their time on the decision, not on catching basics.

What could Arnold take off your backlog?

Let's meet, walk through how Arnold works and look at where it would help your team most.
